

Mōhio

Product Overview

Form Processing and Development

Form Processing and Reporting

The Mōhio platform can process any existing Advanced or MyPractice form output (XML). Data is usually transferred automatically via Health-Link Messenger and then is imported in near real time directly into the Mōhio data warehouse.

By utilising the Mōhio data warehouse all reports will be based off live form data; they can then be accessed on demand, automatically generated for download or emailed on a daily/weekly/monthly/quarterly basis.

We can process forms for claiming and budget control purposes.

We can process existing Advanced Forms as a standalone solution or as part of a timed migration to MōhioForms.

MedTech Advanced and MyPractice Form Development

While we usually focus on MōhioForm solutions we can also develop or alter existing Advanced Forms where required.

Forms can include claims processing, clinical decision support, web service interaction, and population health tools.

MedTech Advanced and MyPractice Form Troubleshooting

We are experienced in troubleshooting form issues from other vendors. If you are experiencing problems or require assistance in developing Advanced Forms please discuss your needs with our team.

We can process existing MedTech Advanced and MyPractice forms, perform alterations and undertake new form development.
